Vario: for Improved Soft Tissue Management

Aadva, from GC, offers a comprehensive line of healing screws for soft tissue management. Regardless of the clinical situation, Aadva healing screws provide improved aesthetics. They are available in various anatomical shapes allowing for the formation of an emergence profile adapted to prosthetic restorations. Vario healing screws are 100 % compatible with all Aadva implants.

100 % Compatible with Aadva

Colour Coding

Aadva healing screws are colour-coded based on implant diameter. Identification is quick and simple, reducing the potential of mishandling.

We give a guarantee to our clients that we deliver practical solutions based on GC standards

Aesthetic Abutments

The aesthetic abutment line is the latest addition to GC's Aadva portfolio of cemented prosthetic solutions. With the reduction of its emergence profile height to 0,4 mm EPH, aesthetic outcome and integration of the prosthetic abutment are improved, even in cases where the soft tissue level is critical. The newly added healing screw Vario Low, benefits from a treatment process that is both user-friendly and effective, thanks to its perfectly matched EPH to the new aesthetic abutment line.
